

#### Leukemic Target Cells

FIGURE 1 Cytotoxic activity of NK-92 against different leukemic target cell lines (see Materials and Methods) tested in a (4 h) 11 Cr release assay. Results represent mean = SD of three different experiments

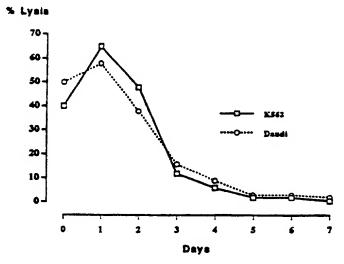

FIGURE 2 NK-92 cytotoxicity after IL-2 deprivation

NK-92 cells were custures in entricoed alpha medium (Myeloculi<sup>TM</sup>) without IL-2. Daily extotaxicist was measured with the "Cr-release away against K\$62-neo" or Daudi target cells. Result anamea at an E:T ratio of 10:1 are presented from one representative experiment.

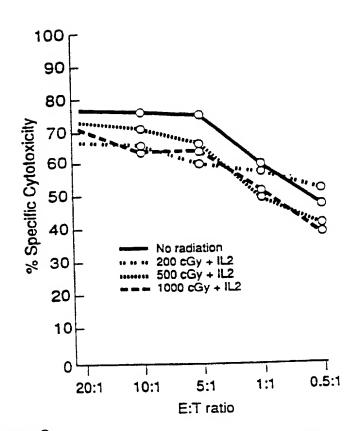

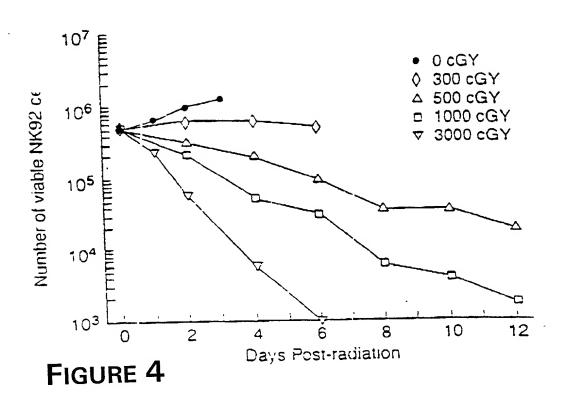

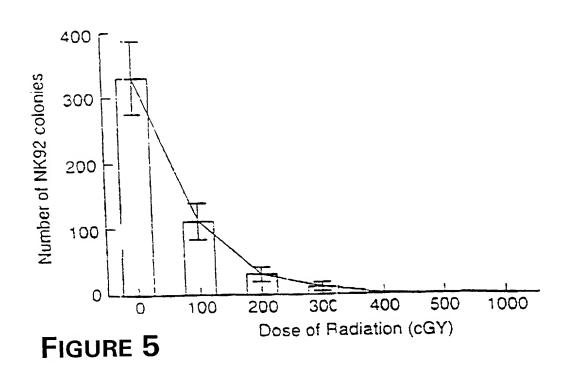

FIGURE 3

Effect of various radiation doses on the cytolytic potential of NK-92 cells

Cells were readused with a comm source at asser ranging between 200 and 1000 cGy.

To allow for some recovery, cells were usen in measure (+IL-2) for 24 bours before symmetry was measure in a +-bour "Cr-release away against the target cell line K562.
